

WHAT'S NEW IN VERSION 10?

IMAGE EDITOR

- Hundreds of new and improved images. PRO Landscape now contains over 3500 of the industry's best quality images. You can also change the color of patterns (for example, a paver object), which provides an endless supply of objects to choose from.
- Highest DPI printing in the industry. You can now optimize the output to the exact DPI of the printer, for example 5760 dpi.
- Lighting integrated into Image Editor. Now you can create your landscape and lighting projects at the same time. In addition, all light areas are editable, including ones from light fixtures.
- *NEW Holiday Lighting!* Create holiday lighting designs. New features include:
 - Light strings
 - Icicle lights
 - Light objects (Santa's, snowmen, stars, candy canes, etc.)
- New cloning tools. Removing existing landscaping just got easier. You can clone from either a fixed or floating area with these new tools.
- New perspective curve tools – Creating curved objects, such as a curved wall, has improved dramatically. Draw one line and PRO Landscape will automatically complete the object.

PLANNER

- New database selections for non-plant material such as grass, mulch, pavers and irrigation. For example, right click on an object like a retaining wall and select the type from the database. The specific type will appear in the quote.
- New Auto-draw tools - Draw mulch, grass or weed barrier around a bed (even a curved bed) with one mouse click.
- New tool to automatically create edging (e.g., brick) along a path. For example, a sidewalk with a row of brick along each side.
- Paver Calculator – Enter the dimensions of a paver or the total area and it will calculate the number of pavers required.
- Adjust pattern transparency while rendering to create breathtaking CAD plans.

PROPOSAL

- New report templates, including reports with a preview picture of the job!
- You can now create a proposal without first creating a landscape plan. This is a great way to create a quick bid without creating a drawing.
- Ability to add items from the database to an existing proposal:
 - An entire project
 - Selecting items by category.
 - Selecting an item by SKU.
- Import your prices from QuickBooks, CLIP, a manufacturer or other data sources. You can also export prices to use in other programs.
- Tighter integration with Horticopia. Now you can launch Horticopia and display or print information sheets from a proposal directly from PRO Landscape (Horticopia Version 3 required).
- Automatic Price Adjustments - You can now increase or decrease all prices.

GENERAL

- Project Timer – A timer has been added to Image Editor and Planner so you can track how long you spend on each design. Track design time for the current session as well as overall project time.
- PRO Landscape databases can be placed on a server so you can share projects and prices with other designers.
- Automatic backups – you can now schedule automatic backups of the PRO Landscape databases.
